## **CLAIMS**

What is claimed is:

5

10

IJ

1. A method comprising the steps of:

determining the actual consumption of specified system resources in a logical partition; comparing said actual consumption with a specified permitted consumption for said resources in said logical partition; and

reducing said actual consumption of said resources to said specified permitted consumption if said actual consumption exceeds said permitted consumption.

- 2. The method of claim 1 in which said specified system resources are processor resources.
- 3. The method of claim 1 in which said actual consumption is determined by averaging said consumption over a plurality of time intervals.
- 4. In an information handling system in which a physical machine comprises one or more logical partitions, each of which is allocated a defined portion of machine resources, a method of enforcing capacity limitations including the steps of:

specifying a maximum allowed consumption of said resources by one of said one or more logical partitions;

measuring an actual consumption of said resources by said logical partition; comparing said actual consumption with said maximum allowed consumption to determine whether said actual consumption exceeds said maximum allowed consumption; and if said actual consumption exceeds said maximum allowed consumption, reducing said actual consumption of said resources to said maximum allowed consumption.

5. The method of claim 4 in which said logical partition is one of a group of logical partitions, said maximum allowed consumption being specified as a proportion of the resources available to said group of logical partitions.

- 6. The the method of claim 4 in which said group of logical partitions comprises all of the logical partitions on said physical machine.
- 7. The method of claim 5 in which each of the logical partitions in said group is assigned a weight, said proportion being defined as the ratio of the weight of said logical partition to the sum of the weights of the logical partitions in said group.
  - 8. The method of claim 7 in which said logical partition is also assigned a phantom weight that is added to said sum of the weights of the logical partitions in said group in determining said ratio.
  - 9. The method of claim 4 in which said specified system resources are processor resources.
  - 10. The method of claim 4 in which said actual consumption is determined as an rolling average of said consumption over a predetermined time interval.
  - 11. A program storage device readable by a machine, tangibly embodying a program of instructions executable by the machine to perform the method steps of claim 1.
  - 12. In an information handling system in which a physical machine comprises one or more logical partitions, each of which is allocated a defined portion of machine resources, apparatus for enforcing capacity limitations including:
  - means for specifying a maximum allowed consumption of said resources by one of said one or more logical partitions;

means for measuring an actual consumption of said resources by said logical partition; means for comparing said actual consumption with said maximum allowed consumption to determine whether said actual consumption exceeds said maximum allowed consumption; and means for reducing said actual consumption of said resources to said maximum allowed

consumption if said actual consumption exceeds said maximum allowed consumption.

- 13. The apparatus of claim 12 in which said logical partition is one of a group of logical partitions, said maximum allowed consumption being specified as a proportion of the resources available to said group of logical partitions.
- 14. The apparatus of claim 13 in which each of the logical partitions in said group is assigned a weight, said proportion being defined as the ratio of the weight of said logical partition to the sum of the weights of the logical partitions in said group.
- 15. The apparatus of claim 14 in which said logical partition is also assigned a phantom weight that is added to said sum of the weights of the logical partitions in said group in determining said ratio.
